The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene. The promoter region was amplified by PCR from leucocyte DNA of over 50 individuals, and sequenced.

8 Previously unknown single nucleotide polymorphisms (SNP) were care identified. These were at: base 36 (base -1584 according to the identified. These were at: base 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature), where the SNP was C to G, occurring at an estimated frequency of approximately 20% in the position 194 (-1426), C to T, approximately 20% frequency, neutral function; position 620 (-1000), G to A, approximately 20% frequency, neutral function; position 620 (-1000), G to A, approximately 30% frequency, unknown function; position 940 (-680), C to T, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 950 (-1000), C to T, approximately 30% frequency, unknown function; position 940 (-200), C to T, approximately 30% frequency, unknown function; position 940 (-200), C to T, approximately 30% frequency, unknown function; 1255 (-365), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function; position 940 (-680), C to A, approximately 30% frequency, unknown function and 1258 (-325).

The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates anti-darressant solority for clearance of CYP2D6 Substrates anti-darressant solority is receptor; inhibitor maniforming the position of CYP2D6 substrates anti-darressant solority is receptor anti-darressant solority is receptor anti-dar polynucleotide capable of hybridizing to CYP2D6 promoter useful for the optimization of drug therapies using substrates of cytochrome P-450 correlation between genotype and phenotype in the CYP2D6 polymorphism. Testing for the mutation will allow the identification of intermediate metabolizers and therefore allow quantitative predictions to be made on in vivo drug metabolism capacity, thus providing a very potent tool for improving the therapy of diseases with drugs that are antidepressant, selective serotonin reuptake inhibitor, incuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the CYP2D6 promoter. The strong association of the common C to G mutation at -1584 bp with increased enzyme activity significantly improves the Claim 1; Fig 1; 41pp; English.

```
polynucleotide capable of hybridizing to CYP2D6 promoter useful for ne optimization of drug therapies using substrates of cytochrome P-450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 (base -1584 according to the Human Cytochrome P450 Allale Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of G at position -1584 bp with increased enzyme activity. The C to G single nuclectide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of C CYP2D6 substrates (antiarrhythmic, beta-adrenergic receptor antagonist, tricyclic antidepressant, selective servoin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the CYP2D6 promoter. The novel variant forms of the development of a pharmacodynamic profile of drugs for a given caption, and diagnostic tests for the discrimination of

different alleles in human individuals, provide a very potent tool for improving the therapy of diseases with drugs that are targets of the CYP2D6 gene production, and whose metabolism is therefore dependent on CYP2D6 activity.

Once: The present sequence is not shown in the specification but inderived from the CYP2D6 promoter sequence given in the Sequence Listing (see AAH26169).

New sequence determination oligonucleotides, useful for detecting

```
detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenoblotics. Human CYP2D6 gene is located on chromosome 22.

The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human CYP2D6 gene 5' flanking region containing polymorphic sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D5) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 2. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytochrome P450 2D6; CYP2D6; enzyme; detection; xenobiotic; ligase-based sequenced determination; drug metabolism; chromosome 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        exon
                                                                                                                                                                                                         exon
                                                                                                                                                   Key
 ANK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient, s genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
cuplynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
co AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule encoding enzymes similar to human aminoacylase-1 (ACY-1) (EC 3.5.1.14) (a metalloprotein Cytosolic enzyme). The ACY-1 similar polynucleotide and encoded peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic agents, and serve as targets for the development of human therapeutic agents that modulate enzyme activity in cells and tissues that express the enzyme. ACY-1 has been found to be expressed in humans in the placenta, T cells from T cell leukemia, ovary, brain, lung and leukocyte, and therefore may be a drug target for cancer therapy and act as a diagnostic marker for these cancers. The present sequence represents the genomic DNA of the enzyme similar to human aminoacylase-1 (ACY-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated nucleic acid molecules encoding enzymes similar to human aminoacylase-1, useful as a drug target and diagnostic marker for cancers e.g. T cell leukemias and ovary, brain or lung cancers -

                                                                                                                                                                                                         The present invention provides the protein and coding sequences of a number of human reproductive system related antigons. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                           Isolated nucleic acid molecule encoding a reproductive system antiqun is used in preventing, treating or ameliorating a medical condition \,\cdot\,
                                                                                                                                                                                                                                                                                                                                                                            Gaps

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-451937/48

and/ or prognosing Isolated polypeptide for treating, preventing and/ or prognosin disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis

Example 2; SEQ ID NO 3810; 781pp + Sequence Listing; English

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, castrointestinal tract, luyer, lung, or urogenital; (b) immune conterned discorders e.g. Addison's discase, allegies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rhemmatoid arthritis and ulcerative colitis; (c) cardiovascular disorders e.g. cerebral anoxia and epilepsy;

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M2) for an agent capable of modulating GCA or an inflammation (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from GS, where the level of expression of the gene is indicative of inflammation; (4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and

     δλ
          from Gs in the tissue. Mi is useful for expression of years(s) and the tissue. Mi is useful for modulating GA, M3 is useful for screening an agent capable of modulating GA, M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease, also bacterial infection, viral infection, parasitic infection, protozoal infection, ungal infection and M5 is useful for treating one of the above conditions. The present squence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WHPO at
                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cancer; colon; breast; ovary; oesophagus; kidney; thyroid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, opesophageal, ovarian, kidney, prostate or pencretic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer,

```
agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL7010), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 reproductive system related antigen; reproductive system disorder; gene therapy; ds.

```

```
The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a

Sequences AAS28878-AAS28926 represent genomic DNA molecules which encode the immunoglobulin polypeptides of the invention. The polynucleotides and polypeptides can be used to diagnose a pathological condition or a susceptibility to a pathological condition in a subject by determining the presence or absence of a mutation in a DNA sequence or determining the presence or amount of expression of the protein. Alternatively the identification of a binding partner to a sequence allows determination of changes in protein activity. The sequences can be used as research tools for receptors or other signal transduction pathway proteins that interact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated novel immunoglobulin polypeptide for monitoring the presence and progression of diseases and for diagnosis \dot{\,}

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TTTTT3'], doubte-stranded cDNA was size selected, ligated to ECo RI adapters (pharmacia), digested with Not I and cloned into the Not I and ECO RI sites of a modified pTTT3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento saces and M.Fatima Bonaldo. RNA from spotsatic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fullyama, A., Hattori, M., Toyoda, A., Taylor, T.D., Yada, T., Totoki, Y., Watanabe, H. and Sakaki, Y. Totoki, Y., Watanabe, H. and Sakaki, Y. Totoki, Y., Watanabe, H. and Sakaki, Y.
